## About Us

**Piber Plastics Australia has consistently invested in modern technology and human capital to cement its position as the supplier of choice to the food and packaging industries as well as the retail sectors.**

Piber Plastics is an Australian owned company based in Melbourne Australia. We have been in business since 1999. Our 5400 m<sup>2</sup> state of art manufacturing facility is situated at Derrimut, in the western suburbs of Melbourne within proximity of our food and dairy customers.

Our services are delivered to the Australian and the Asia-Pacific region. Piber Plastics implements its expertise in the industry to locally manufacture your business requirements. Piber Plastics utilizes premium state of the art facilities to provide consumers with the highest quality products. Our continuous investment in advanced technologies has enabled us to produce and deliver the best quality products within required timeframes. In addition, we have an in-house designing department dedicated to developing innovative products.

Our company prides itself on timely delivery and outstanding service. We work on the principle of providing the customer with the best possible service and highest quality product. With our team of highly trained staff and technical expertise we are able to design a tray, pail, tub or any plastic product to suit your business needs.

Piber Plastics has modern manufacturing facilities with full HACCP accreditation. With a machinery capacity from 50 tons to 600 tons we are able to meet any type of demand for your business from a small to a large product with IML printing capabilities.

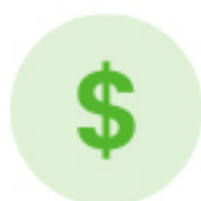

# Core Values

**Quality**  
Piber plastics provides high quality products that are both durable and attractive.

**Customer Service**  
Piber plastics ensures that their consumers receive the highest level of services.

**Competitive Pricing**  
We offer competitive pricing with durable products.

**100% Recyclable**  
All of our products are 100% recyclable and environmentally friendly products.

Piber Plastics Australia is fully accredited with Hazard Analysis Critical Control Point (HACCP) which is a systematic approach to food safety that addresses risks presented by physical, chemical, and biological hazards through prevention rather than finished product inspection. Hazard Analyses (HAs) are used in the food industry to identify potential food safety risks so that key actions, monitored at Critical Control Points (CCPs), can be taken to reduce or eliminate the risks of those hazards being realized. The system is used at all stages of food production and handling. Today, HACCP is being applied to industries other than food, such as cosmetics and pharmaceuticals. This method which, in effect, seeks to plan out unsafe practices differs from traditional "produce and test" quality assurance methods which are less successful and inappropriate in a modern food industry.

Employees are clearly made aware of hygiene standards of the organization. Training is provided regularly to maintain hygiene standards for food related industry.

At Piber Plastics we acknowledge environmental regulations and follow approved codes of practice. We aim to strictly adhere to environmental effects of our company's activities. We maintain reasonable standards in packaging, storage, and distribution of the products we manufacture. Piber Plastics has a strict hygiene program in place that gives importance on identification, evaluation and control of hazards relating to food safety. Hazards are maintained that the equipment and products are food safety compliant.

We have this handy fusion reactor in the sky called the sun, you don't have to do anything, it just works. It shows up every day.

~ Elon Musk

Our state-of-the-art manufacturing facility located in Melbourne, Victoria boasts over 5400m<sup>2</sup> of manufacturing space, that is supported with 100KW of solar power. We believe that it is every business's responsibility to do their bit in trying to protect the environment. We are committed to renewable energy and utilising solar energy to help reduce our environmental footprint. Utilising solar energy has significant benefits on the environment such as the reduction of air pollution, helping slow climate change and a significant decrease in the water utilised to help generate electricity. The installation of the 100KW system has allowed us to reduce carbon emission by a whopping 170 tons annually. This has allowed our business to do our bit in reducing air pollution. Contributing to help slow climate change, preserve our water supply, and aid in prospering a sustainable future.
